An orangutan's lifespan is about 35-40 years in the wild, and sometimes into their late 50's in captivity. Wild female orangutans reach puberty at about 8 years of age, but a female isn't ready for her own baby until she's in her teens. Although in captivity orangutans have been known to be able to produce offspring as early as 6 years of age.

[Top 10 facts about orangutans | WWF](#)

Poaching orangutan infants and hunting for meat also threatens the species. Mothers are often killed for their babies, which are then sold on the black market for pets as they are cute. Babies cling to their mothers and suckle their mother's milk until the age of 6 years. Rescued infants are then rehabilitated by volunteers at orangutan rescue centres. To support and help with the care of ...

[The Orangutan - Adaptation](#)

Orangutans are the most intelligent beings on the planet after human beings, and they adapt to the environment by passing on culture through each generation. A self-aware being, as intelligent as a six year old child, their drive to extinction is an individual story of horror as they are macheted and burnt alive as an agricultural pest.

[About - The Orangutan Project](#)

'Orangutan' is a name given to two species of great apes – the Bornean Orangutan (*Pongo pygmaeus*) & the Sumatran Orangutan (*Pongo abelii*). Both species are now critically endangered primarily as a result of habitat destruction. Although not as vocal as other great apes, orangutans make a variety of different sounds. Adult male orangutans make what is referred to as a 'long call', a ...

[10 orangutan facts! | National Geographic Kids](#)

Thanks to you, OFI has been successful in keeping the Orangutan Legacy Forest and surrounding buffer and wildlife corridor land out of the hands of short-sighted developers since 2011. However, our fight to protect the forests of Borneo and our need for your support is far from over.

[Why Do Orangutans ... | Smithsonian's National Zoo](#)

If you take a few minutes and watch an orangutan, you'll swear they're just like us. And they kind of are... Orangutans are large, but in general they are quite gentle. Adult males can be aggressive, but for the most part they keep to themselves. They are uniquely arboreal – living their lives quietly up in the trees away from predators... and only descending to the forest floor when they ...

[Orangutans | Orangutan Conservancy](#)

[How Smart Is an Orangutan Exactly? - Inverse](#)

Pregnant orang-utan protectively hugs her daughter as ruthless Borneo bounty hunters move in for the kill . Pair saved at last minute by Brit-based animal rescue group. Palm oil firms trying to ...

[orangutan | Definition & Facts | Britannica](#)

An orangutan seems to know the location of different fruit trees in the forest, and when each is due to bear fruit. Some trees bear fruit only every two or three years. Young orangutans learn this information from their mothers. Orangutans spend most of their lives alone. The males are very territorial, and each male's territory overlaps those of several females. Because orangutans do not ...

[Funny moment orangutan attempts to get food from box...](#)

We are often asked questions about Orangutans here at The Great Projects, so we thought what better way to answer some of the most common ones than by a blog post? Where are Orangutans found? The Orangutan can only be found in two locations around the world. These Great Apes live in Indonesia and Malaysia on the islands of Sumatra and Borneo and they are not found anywhere else in the wild ...

[10 Interesting Facts About Orangutans - WorldAtlas](#)

The orangutan was first described scientifically in 1758 in the Systema Naturae of Carl Linnaeus as *Simia satyrus*.: 20 It was renamed *Simia pygmaeus* in 1760 by his student Christian Emmanuel Hopp and given the name *Pongo* by Lacépède in 1799.: 24–25 The populations on the two islands were suggested to be separate species when *P. abelii* was described by French naturalist René Lesson in 1827.

[Orangutan | Wild For Life](#)

The orangutan belongs to the group of primates known as great apes. The indigenous Dayak people of Borneo tell an old legend that the orangutan was originally a human who pretended not to be able to speak and climbed up the trees to escape having to work. The name 'orangutan' originates from two different Malay and Indonesian words: 'orang' (human) and 'hutan' (forest). Orangutan thus means ...

[How strong is an orangutan? - Quora](#)

DID YOU KNOW? Orangutans are mostly solitary, which is rare since primates usually have rich social lives. Some theories suggest that being solitary is a necessity for Orangutans since their caloric needs are so large they cannot share. Centuries ago, orangutans were much larger than they are today. Fossil remains show that a species of giant orangutan existed in China 500,000 years ago. ...

[Find out more about Orangutans and the threats to their ...](#)

Orangutan means "person of the forest" in the Indonesian and Malaysian languages. Orangutans have cognitive maps, often returning to the same feeding sites they have visited in the past to forage for fruit, insects and flowers. The primary locomotion of an orangutan is known as "arboreal clambering."

[Orangutan Is Always In A Good Mood](#)

An Orangutan's normal habitat is the tropical rainforest that is dominated by trees of the family Dipterocarpaceae, which interestingly enough, is also becoming endangered in parts of the world. In Sumatra, Orangutans are entirely arboreal because of large predators (such as tigers, leopards) patrol the forest floor.

[Save the Orangutan](#)
